CIS 344 | Event Volunteer Management System

This guide explains how to install and use the local classroom project.

A. Install with XAMPP

Begin by launching both the Apache and MySQL services via your XAMPP manager. Move the complete project folder to the htdocs folder of XAMPP. Open Chrome and navigate to http://localhost/phpmyadmin in order to upload the sql/schema.sql file. Another option is to upload sql/sample_data.sql to include some sample volunteers and events in the database. Next, rename your config.example.php file by copying it as config.php and add your MySQL username and password. After these steps, navigate to http://localhost/Event_Volunteer_Management_System/setup.php to create a manager account.

B. Volunteer Management: Select Volunteers. Input the volunteer's first name, last name, email, phone number, and skills, and then click on Add volunteer. If it is necessary to modify records, choose Edit. If there’s a need to remove a volunteer, choose Delete; the assignments connected with this volunteer will be removed.

C. Event Management:t Choose Events. Fill in the event title, date, location, number of volunteers allowed to participate, and description if necessary, and click on Add event. The screen will show how many assignments are active and how many places are free.

D. Volunteer Allocation: Select Assignments. Choose a volunteer and the event,d set a role and status, and click on Assign volunteer. The system will not allow assigning a volunteer to the event if he/she has already participated in it or if it is full. Use status to change the record.

E. Dashboard: The dashboard displays how many volunteers and events there are and how many active assignments there are currently. It will also display the capacities of the events and assignments done recently using SQL JOIN.
